

first need® **Base Camp™**

PORTABLE WATER PURIFICATION SYSTEM

first need Base Camp Purifier —

Non-Chemical drinking water purifier that cleanses your water instantly, reliably and effectively using our proprietary "Structured Matrix™" technology. With an average capacity of 500 gallons you get Pure refreshing water when and where you need it, without chemicals, hold time or electricity.

How "Structured Matrix™" Technology purifies your water and protects you without using chemicals**

Ultrafine Microstraining down to 0.1 micron (0.4 micron absolute)-small enough to completely remove Giardia, Cryptosporidia and other specific parasites.

Molecular Capture mechanisms remove chlorine and organic chemicals including specific pesticides, herbicides, and solvents, along with foul tastes, bad odor and color.

Electrostatic Removal because small particles are electrically charged, General Ecology's "Structured Matrix™", with oppositely charged surfaces, removes colloids and other particles even smaller than those removed by microfine filtration.

All of these purification mechanisms work together to remove viruses, disease bacteria and other contaminants too small for microfiltration alone...without chemicals. No more iodine taste!

** Microbiological claims based on independent certification to EPA Guide Standard for microbiological purification.

Designed for rugged use — Base Camp water purifier is laboratory tested and field proven. Base Camp has a stainless steel housing and a double-action pump for more water with less work. Field serviceable and easily maintained, Base Camp will serve you and your group for many years. Most importantly, we don't make claims not tested by independent laboratories and field service. It is one reason our purifiers are the favorite of expeditions world-wide for over 30 years. Trust your health and safety to nothing less!

- High Flow Rate*
- Large Capacity*
- Economical*
- Effective Protection*
- Ergonomic Pump*
- Field Serviceable*
- Light Weight*
- Compact*
- Cordura Case*

Technical Specifications

Average Capacity*	500 gallons (1,900 liters)
Cartridge Type	RS-1SG
Temperature Range	33°F (0.5°C) to 145°F (63°C)
Particle Retention Nominal (Absolute)	0.1 μ (0.4 μ)
Vessel Diameter	4.125 in (5.5 cm)
Vessel Height (with spout)	8.875 in (22.6 cm)
Pump Height	10.5 in (26.7 cm)
White Pump Tubing	30 in (76.2 cm)

*Based on clean wilderness waters.
